

ClaimRadar - Project Description

Hossam Elshahaby

Overview

ClaimRadar is a voice-first opportunity intelligence agent. It helps students, job seekers, researchers, founders, and builders discover time-sensitive opportunities, verify fit, and prepare the next action.

Problem

High-value opportunities are spread across event sites, job boards, university pages, PDFs, newsletters, and social posts. People often miss deadlines because they must manually search, verify eligibility, compare requirements, and write outreach messages.

Solution

ClaimRadar lets the user speak a goal, searches the live web, extracts source details, scores each result, and turns the best matches into action plans. The agent supports mic, mute, captions, transcript saving, call history, and secure setup for API keys.

Capability	Implementation role
Tavily	Live search, extraction, crawling, and source verification
Nebius Token Factory	Open-model reasoning, summarization, scoring, and drafting
ElevenLabs	Professional voice-agent interaction

Core Features

- Voice or text search for opportunities by field, location, deadline, and user profile.
- Ranked opportunity cards with fit, urgency, impact, effort, confidence, source link, and next action.
- Opportunity detail pages with eligibility checklist, required documents, similar options, email draft, and application draft.
- Saved opportunities with status tracking: New, Interested, Applied, Waiting, Rejected, Accepted.
- Call history with transcript, summary, found opportunities, and follow-up tasks.

Impact

ClaimRadar reduces missed opportunities for people without strong networks. It supports students, immigrants, researchers, and builders by turning scattered information into verified, actionable plans.

Demo Flow

- Open a secure session and connect Nebius, Tavily, and ElevenLabs.
- Ask by voice for AI, robotics, automotive, and hackathon opportunities in Sweden, Europe, or online.
- Review ranked results with source verification and scoring.
- Save the transcript, open the opportunity brief, and draft the next email or application answer.

Prototype URL

<https://claimradar.hossam-a-elshahaby.chatgpt.site>

Business Model

- Free personal search
- Pro monitoring and application support
- University and career-center dashboards
- Community and accelerator opportunity intelligence

Submission Assets

The project package includes a pitch deck, project description PDF, README, live prototype link, and space for a demo video link once recorded.
